

Hospital Provided Prescriptions Following a Hospital Stay or routine Out- Patients Appointment

Please note that any urgent medication will be prescribed and provided by the hospital.

Non-urgent medication: Your hospital may send us a request for a prescription recommendation. If your GP approves the request, please allow up to 10 working days for processing. Your hospital doctor is aware of this timeframe.

Urgent medication: Your hospital doctor will issue the prescription during your visit. They can prescribe for the hospital pharmacy or as an FP10 prescription for any community pharmacy. If you are unable to have your medication dispensed at the hospital pharmacy, please ask your hospital doctor for an FP10 prescription to take to your community pharmacy. Your GP will not initiate urgent prescriptions.

Please be sure to discuss any urgent medication needs with your healthcare team during your hospital visit.
